Vanguard ETF/A - Firecall

Extended ACF2™ Privileges Access for Emergency Situations

PRODUCT INFORMATION

Vanguard Firecall for ACF2 (ETF/A) provides full oversight for authorized users who are granted emergency elevated access to ACF2 Rules, within specific defined parameters and a pre-determined time frame. This feature allows unprivileged LIDs to swiftly access key systems in the event of an emergency and resolve targeted issues in a timely and efficient manner.

BUSINESS CHALLENGE

Provide emergency access for elevated privileges with hardened systems that meet and exceed both internal and external audit requirements.

VANGUARD SOLUTION

ETF/A effectively mitigates the risk of sensitive information exposure or damage, while also granting on-demand access to support personnel to swiftly minimize the impact of any potential outages. With ETF/A, support personnel no longer require full-time access to sensitive resources. Access is obtained on- demand through the activation of one or more Firecall privileges.

KEY FEATURES

- Quickly Elevates Privileges for ACF2
- Follows Enterprise Zero Trust Model
- Simplifies Effectiveness of ACF2 Security Implementation
- Includes VIPMAIN Connectivity for Enterprise Implementation

KEY BENEFITS

- Minimize Disruption
- Reduces Risk and Exposure
- Improves Operational Efficiency
- Report on User Access and Usage
- Help Meet Audit Requirements for Emergency Access
